Group 17 – Software Design Project Weekly Report for Week 48

During the 4th week of our project, we had a sign-off meeting with our supervisor for the User Story 2. We successfully made our demonstration and signed off our story.

After the sign-off meeting, we held a meeting among our team to decide on which story we should be choosing next. During this meeting, we decided on continuing with the User Story 3. Following this, we held a discussion about how to proceed with our current user story.

We then started on implementing the rules required as a part of the assignment and their unit testing. After this, we proceeded with the 4th additional rule that is required for us to implement. We also implemented the notifications when a rule matches the observed traffic.

In the following days, we will be continuing with the preparation of class and sequence diagrams; and more detailed test scenarios. We believe that we will be signing off the User Story 3 next week.
